

## IT SPEAKS YOUR LANGUAGE.

Intercoms can finally speak your language, so you do not have to guess what they say.

Now, your language can be installed on Interphone Tour, Sport and Urban. Additional languages available:

- Finnish
- Catalan
- Polish
- Norwegian
- Turkish
- Dutch
- Korean
- Hungarian
- Portuguese
- Chinese (mandarin)
- Hebrew
- Greek
- Danish
- Swedish

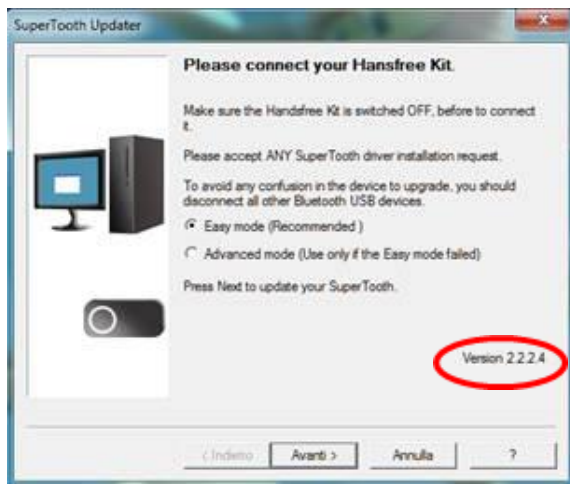

To install your language you just have to launch the software updater, choose your language from the drop-down menu and start the update.

The software will automatically change the Russian language with yours.

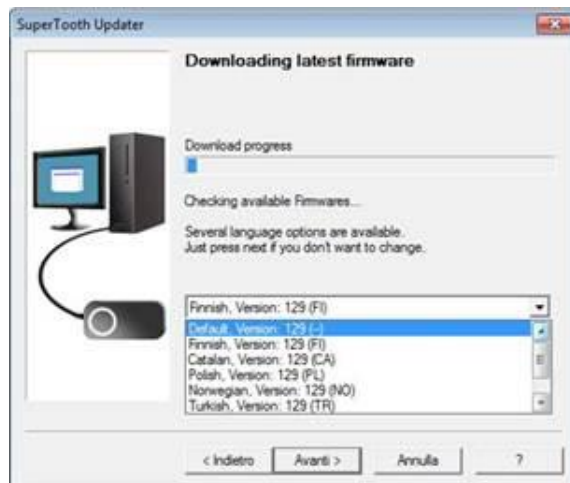

For end-users who only have to update intercom's firmware - without having to change the language - it is enough to select the "DEFAULT" option.

How to do it? Follow the steps below.

- Download the last available updater directly from website
- Follow the steps to install the updater (new version will overwrite the previous one if present).
- Once installed connect your unit (TOUR, SPORT or URBAN) and launch the software, the Version is displayed on the right bottom, you should use 2.2.2.4 or newer.

- Press "NEXT". A new window will show you a dropdown menu with the available languages.

- choose the desired language and then press "NEXT" again; software will update the unit with last available firmware and chosen language.

\*Choosing "DEFAULT" from dropdown menu won't install any different language, it just update the software release with default languages (English, French, Italian, German, Spanish, Japanese, Russian, Czech).

Once installed the new language in the unit, you need to make it active by:

- Setup menu of the unit.
- Interphone panel.
- Interphone App (iOS and Android).
