

First of all is necessary to make a pairing between Interphone unit and IOS device:

- Starting from off, press and hold intercom button until red and blue led flash.
- Active bluetooth on your mobile phone-
- Check the bluetooth list for INTERPHONE(Tour, Sport or Urban) and click on it to connect.
- If you need insert code «0000»
- Double blinking of blue led shows correct connection.

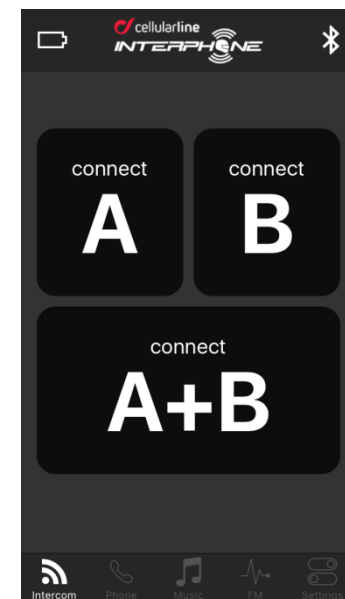

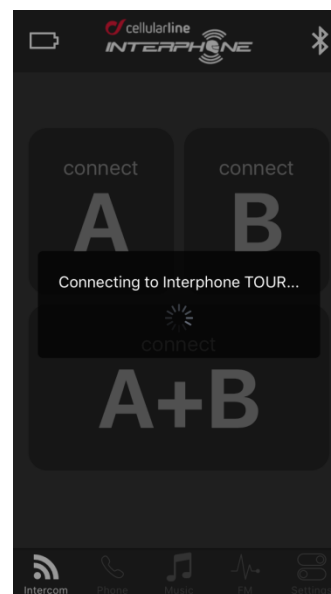

APP INSTALLATION

Search for **INTERPHONE CONTROL** on APP STORE, install on your Iphone and launch it.

APP will start searching for your paired unit and it will display the following screen.

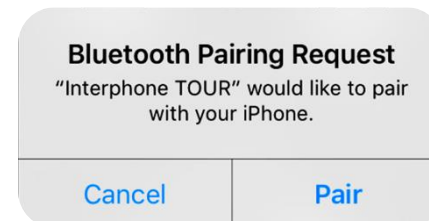

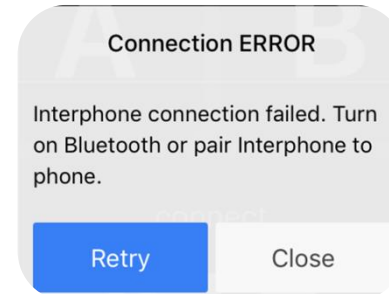

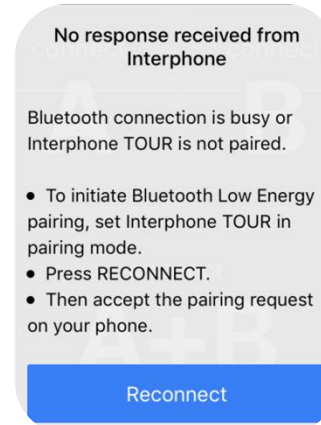

The window with A+B is disabled if an URBAN unit is paired.

After few seconds a POPUP will appear asking to make a second pairing with your unit because of INTERPHONE APP needs it to work.

Follow the steps:

- Put in pairing mode your unit again by pressing **phone** and **power** buttons at the same time for 3 seconds until led flashes red and blue simultaneously
- Press «Reconnect» button on INTERPHONEAPP
- If a POPUP error appears , your device is not updated to the latest firmware version which is necessary to connection with APP
- Otherwise if your unit is already updated, a POPUP for a Pairing Request will appear.
- Press Pair and process will be finished.

- The final screen will be as shown in the picture.
- The right connection is revealed from status battery indicator, no more empty like at the beginnig of process.
- The pairing procedure needs only be performed once, subsequent times will be performed automatically
