

## **WE'VE ALREADY CHANGED HOW YOU RIDE. AND WE'RE ABOUT TO DO IT AGAIN.**

### **Interphone and Sena are joining forces to start a revolution on two wheels**

We understand that your needs are constantly changing and that having a stable, reliable and fast connection is essential. Nobody likes barriers and anyone who loves riding a motorbike is sure to have experienced the frustration of having to go through complicated procedures to connect communication devices from different brands.

We've listened to you and we've got your back...the open road is an experience to be shared for us too, the more the merrier!

This is why we are delighted to announce our partnership with Sena based on sharing a special communication protocol, which eliminates any interaction problems for all Interphone and Sena riders:

## **ONE CONNECTION FOR ALL**

### **This union has led to a new line of motorbike intercoms: Interphone UNITE**

The 3 new devices, U-com2, U-com4 and U-com16, use the new communication protocol for complete compatibility with Sena intercoms, as well as the most common communication systems built into helmets, TFT systems, GPS sat-navs and, of course, smartphones.

These new motorbike intercoms use the most high-performance technology around at the moment, Bluetooth 5.0 or Mesh 2.0. When you choose an Interphone product, you know you are getting outstanding performance and quality which, together with the new design, will leave you speechless.

## INTERPHONE UNITE
